

Lead Opportunity Score — decision brief

GUARDED PILOT ELIGIBLE

What happens when capacity is limited

What we learned

- Lead Quality reaches 1.69x lift in the top 10%.
- Opportunity retains 1.37x after inventory constraints.
- Inventory reduces lift versus quality alone; incremental value is unproven.
- A future snapshot is never used; missing history stays unknown.

Recommended next move

Run a forward shadow period, then a guarded randomized pilot; do not automate from this retrospectively consumed holdout alone.

Safe operational view

Show Lead Quality and Inventory Confidence as separate axes; the combined score passes the absolute lift gate but inventory incremental value is not proven.
